1 Purpose

This document is a system test plan for EventFolio. It describes the testing strategy and approach to testing. The team will use to verify that the application meets the established requirements of the stakeholders.

2 Objectives

- Satisfies the criteria for User Acceptance Testing.
- Achieves the required software standards.

3 Strategy and Approach

3.1 Testing Strategy

System Testing activities will include testing of new functionalities, modified functionalities, screen-level validations, testing of internal and external interfaces.

3.2 Testing Types

3.2.1 Usability Testing

The goal of Usability Testing is to ensure User Interface is easy to use and appropriate access is provided.

Test case	Problem	Solution
Login	Login Button does not respond User requests. Login Page is hanged up as Data may be corrupted.	Check the database for verification and reload the page.
Create or Delete Event	User is lead to same page again and No event creation and deletion takes place	Check the functioning of the create and delete button
Notification	Some of the Notification from List are unable to open May lead to another notification on clicking some desired notification	Check for all the Notification if this applies to all list of notification check the functionality
Comment	Does not allow user to post any comments Comment box is not displayed	Unknown
Resolution Issues	Font-size and Images does not fit the screen at the time of launching the application Content may look blur	Try to use a small images and use of standard font, font-size etc.

4 Execution Plan

The execution plan will detail the test cases to be executed. The Execution plan will be put together to ensure that all the requirements are covered. The execution plan will be designed to accommodate some changes if necessary, if testing is incomplete on any day. All the test cases of the projects under test in this release are arranged in a logical order depending upon their inter dependency.

5 Testing Schedule

System testing is scheduled for a period of 7 days starting 04/11/2017 to 10/11/2017. Testing will complete all the tests during the first 3 days. The defects retesting and regression testing will occur in the last week of System Testing. The run dates for defect retesting period may be changed according to the need to retest and close the defects.
